PEER SUPPORT

(it is developed using HTML, CSS, JavaScript, PHP, and
MYSQL)

ABSTRACT

- The main objective of the project is to create a web application that allows users (students) to upload and download the study materials based on their need. The uploaded material will be displayed in the form of list and students can download these study material. Using the website, students can request the topics which they want from the other students or peers.
- There are various management systems in different universities, colleges, and institutes where students can download the content uploaded by the faculties only. We want to develop a different a different website where students can download and upload the study materials for their peers.

Continue..

- The Peer Support website provide uploading and downloading facilities through a web browser. A student can, register himself just for getting the uploaded files and he can also become the uploader after selecting the base topic.
- The Administrator will have the additional functionalities when compared to the common user. He can view the registered students, their topics, uploaded files etc. He can also add new topics in topic list.
